Guillermo Campos | Meitos24

## Objective

Computer Science Engineering student with a strong interest in web development and software engineering, particularly in building full-stack applications. Looking for an internship or junior position where I can apply my skills in front- and backend development, contribute to real-world projects, and continue learning modern technologies.

## Professional Experience

- **Laudem, Contago** *January 2026 – Present*
  *Frontend Developer (Vue.js)* Puebla, México
  - Developed and maintained frontend modules using Vue.js 3 for government accounting and ERP systems.
  - Integrated SAT (Servicio de Administración Tributaria) APIs to process and validate tax-related financial data.
  - Implemented state management using Pinia to handle complex data flows between accounting modules.
  - Built dynamic and responsive UI components for large datasets, improving usability and performance.
  - Collaborated with backend teams (.NET APIs) to ensure accurate data handling and system integration.

## Education

- **Benemérita Universidad Autónoma de Puebla** *January 2022 – Present*
  *Bachelor's Degree in Computer Science Engineering (In Progress)* Puebla, México
- **Liceo Británico de México** *2019 – 2022*
  *High School* Puebla, México

## Projects

- **Numerical Methods Web Platform** *2024*
  *Django, JavaScript, HTML, Bootstrap* [GitHub]
  - Developed interactive calculators for numerical methods such as Lagrange interpolation.
  - Built backend logic using Django to process mathematical computations.
  - Designed responsive interfaces using HTML, Bootstrap, and JavaScript.
  - Integrated data visualization to display numerical results.

- **Caserio Boutique Inmobiliaria Web Platform** *2024 – 2025*
  *Next.js, Tailwind CSS, Django REST Framework, SQLite* [GitHub]
  - Developed a full-stack web application for real estate management, featuring a dynamic catalog with advanced filtering (price, location, type).
  - Implemented a robust backend API using **Django REST Framework** to handle property listings, user inquiries, and image storage.
  - Designed a responsive and modern UI with **Next.js** and **Tailwind CSS**, optimizing performance through server-side rendering (SSR).
  - Managed data persistence and complex queries using **PostgreSQL** for reliable property information tracking.

- **Personal Development Homelab** *2025 – Present*
  *Fedora Linux, Docker, MySQL, Tailscale VPN*
  - Repurposed an old laptop as a bare-metal Linux server running Fedora, establishing a personal development infrastructure.
  - Deployed and managed a MySQL database instance using Docker, enabling isolated and reproducible database environments.
  - Configured a Tailscale mesh VPN to create a private network between the server and a Mac workstation, allowing secure remote database access without exposing ports to the public internet.
  - Used the setup as a dedicated backend development server, connecting to the containerized database from local projects.

## Skills

- **Programming Languages:** Python, JavaScript, TypeScript, Golang, SQL
- **Frameworks and Libraries:** Vue.js, Next.js, Django REST, React
- **Databases & Tools:** MySQL, MongoDb Compass, SQLite, DataGrip, Docker, Git/Github, Postman
- **Mobile Development:** React Native
- **Data Science:** NumPy, scikit-learn, R
- **Infrastructure & DevOps:** Linux (Fedora), Docker, Tailscale VPN, SSH, bare-metal server setup

## Additional Information

**Languages:** English (B2), German (A1)
**Interests:** Web development, numerical computing, software architecture, mathematics
